## DETAILED ACTION

1. This office action, in response to the remarks filed 4/29/2003, is a non-final office action.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 4-52 are rejected under 35 U.S.C. 102(b) as being anticipated by Kedar et al (US 4,750,171).

Regarding claims 1 and 4, Kedar discloses a peripheral bus is a conventional 64 timeslot system and each timeslot on the bus forms a logical timeslot channel. Each channel may be used for data or voice (column 6, lines 10-26). The bus also transmits data control channel information on the D channel to provide command information within the entire system (column 6, lines 10-26). These transmissions are made through a modem (column 6, lines 27-34).

Regarding claims 5-9, 14 and 15, data and command information will be sent when requested.

Art Unit: 2631

Regarding claims 10-13 and 17-19, the digital station interface is shown in figure 4.

Regarding claim 16, figure 1 shows a host computer coupled to the communication channels.

Regarding claims 20, 31, 43 and 53, Kedar discloses a peripheral bus is a conventional 64 timeslot system and each timeslot on the bus forms a logical timeslot channel. Each channel may be used for data or voice (column 6, lines 10-26). The bus also transmits data control channel information on the D channel to provide command information within the entire system (column 6, lines 10-26). These transmissions are made through a modem (column 6, lines 27-34). A digital station interface is shown in figure 4. The interface is capable of determining what type of information is being received so that information can be routed to the appropriate location.

Regarding claims 21-27, 29, 30, 32-38, 40, 41, 43-49, 51 and 52, the data will be received and stored in the interface.

Regarding claims 28, 39 and 50, in a personal computer, numerous bi-directional data lines, address lines, control lines and status lines are present which allows for fast data transfer when needed or requested. These lines are shown in figure 1.
